

**MADELEY MANOR NURSING HOME, HEIGHLEY CASTLE WAY, MADELEY
MR GERALD EMERY**

21/01175/FUL & 21/01176/LBC

The report considers two applications:

- for full planning permission for the conversion of Madeley Manor into 12 apartments and 2 houses, demolition of the boiler house, and upgrades to driveway and provision of 30 parking spaces (21/01175/FUL); and
- for listed building consent for the alterations to, and partial demolition of, the Listed Building (21/01176/LBC).

The application site is within the North Staffordshire Green Belt, the Rural Area and a Landscape Enhancement Area as indicated on the Local Development Framework Proposals Map.

Madeley Manor is a Grade II Listed Building. Trees within the site are protected by Tree Preservation Orders 3 and 110.

The 13 week period for the planning application expired on 25th March, and the 8 week determination period for the listed building consent application expired on 18th February but the applicant has agreed to an extension of time to the statutory determination period for both applications to 9th December 2022.

RECOMMENDATIONS

A) With respect to the application for listed building consent 21/01176/LBC

PERMIT subject to conditions relating to the following:

1. Time limit for commencement of development
2. Approved plans
3. Work to be undertaken in accordance with the Repair Schedule unless otherwise agreed
4. Prior approval of details of the methods of blocking up internal openings
5. Windows in the south elevation facing the M6 motorway shall be repaired and secondary glazing (not double glazing) shall be installed in accordance with details that are to be approved
6. Further details of internal doors and window architraves where alterations are being made to be approved
7. Details of repair work to existing windows and details of proposed new windows to be approved
8. Before boiler house building is demolished details of the reinstatement of the rear conservatory/orangery wall to be approved

B) With respect to the planning application 21/01175FUL

- (1) Subject to the applicant first entering into a Section 106 obligation by the 27th January 2023 to secure a review mechanism of the scheme's ability to make a more or fully policy compliant provision of affordable housing, if the development is not substantially commenced within 18 months from the date of the decision, if then found financially viable,

PERMIT subject to conditions relating to the following matters:

1. Time limit
2. Approved plans
3. Prior approval of the position and appearance of cycle (to be secure and weatherproof) and bin stores
4. Prior approval of details of the windows of the Mews
5. Details of screening around the conservatory/orangery
6. Prior approval of surfacing materials for the internal roads, parking and turning areas
7. Provision of access, internal roads, parking and turning areas prior to occupation and retention for the life of the development
8. Landscaping to include replacement tree planting
9. Tree protection measures
10. Contamination conditions
11. Construction Environmental Management Plan
12. Overheating
13. Glazing specification
14. Plant noise
15. Lighting
16. Electric charging points.

- (2) Failing completion of the planning obligation referred to in B(1) by the recommended date the Head of Planning be given delegated authority to either refuse the planning application on the grounds that in the absence of a secured planning obligation the development would not provide policy compliant affordable housing; or if he considers it appropriate, to extend the period of time within which the obligation can be secured.

Reason for Recommendations

Taking into account the requirement for the decision-maker to pay special attention to such matters, subject to conditions it is considered that the alterations to, and partial demolition of, the Listed Building would retain its character and features. The engineering works proposed to provide parking spaces and upgrade the driveway would preserve the setting of the Listed Building.

It is considered that sufficient parking is provided and acceptable living conditions are provided for the occupants of the development. It is also accepted, following the obtaining of independent financial advice, that the scheme is not viable if policy compliant affordable housing is required. Whilst it is recommended that this policy compliant requirement is not sought, given the benefits arising from the reuse of this listed building, the development is acceptable. A Section 106 agreement is required to secure a review mechanism should substantial commencement not be achieved promptly.

Statement as to how the Local Planning Authority has worked in a positive and proactive manner in dealing with the planning application

Amendments have been sought from the applicant and the proposal is considered to be a sustainable form of development in compliance with the provisions of the National Planning Policy Framework.

Key Issues

1.1 There are two applications relating to this site. The first proposal seek full planning permission for the conversion of Madeley Manor, last used as a nursing home, into residential accommodation which falls within a 'Use Class C2', residential institution use. The main manor house is proposed to be subdivided into 6 apartments as is the attached service block. An attached Mews House is to be renovated as a two bedroom dwelling. The orangery and the single storey building linking it to the main house is to be converted to a two bedroom dwelling.

1.2 As Madeley Manor is a Grade II Listed Building, listed building consent is also sought for the works of alteration that are involved. The attached Mews is not part of the listing.

1.3 The application site is within the North Staffordshire Green Belt, the Rural Area and a Landscape Enhancement Area as indicated on the Local Development Framework Proposals Map.

1.4 It is appropriate to consider the application for listed building consent first.

2. 21/01176/LBC - Listed building consent for alterations to, and partial demolition of, the Listed Building

2.1 When making a decision on a planning application for development that affects a listed building or its setting, a local planning authority must have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest it possesses.

2.2 Saved Policy B4 of the Newcastle Local Plan (NLP) states that the Council will resist total or substantial demolition of a listed building, unless exceptionally, an applicant can convince the Council that it is not practicable to continue to use the building for its existing purpose and there is no other viable use. Demolition will not be permitted unless there are approved detailed plans for redevelopment and, where appropriate, an enforceable agreement or contract exists to ensure the construction of the replacement building.

2.3 Saved NLP Policy B6 states that the Council will resist alterations or additions to a Listed Building that would adversely affect its character or its architectural or historic features. Saved Policy B7 states that the change of use of a listed building will only be permitted if its character or appearance would be preserved or enhanced.

2.4 The NPPF, at paragraph 197, states that in determining planning applications, local planning authorities should take account of:

- the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation
- the positive contribution that conservation of heritage assets can make to sustainable communities including their economic vitality; and
- the desirability of new development making a positive contribution to local character and distinctiveness.

2.5 Paragraph 199 of the NPPF states that when considering the impact of a proposed development on the significance of a designated heritage asset such as a Conservation Area, Listed Building or Registered Park and Garden, great weight should be given to the asset's conservation. The more important the asset, the greater the weight should be. This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance.

2.6 In paragraph 201 it is indicated that where a proposed development would lead to *substantial* harm to or total loss of significance of a designated heritage asset, local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or loss is necessary to achieve substantial public benefits that outweigh that harm or loss, or all of the following apply:-

- The nature of the heritage asset prevents all reasonable uses of the site
- No viable use of heritage asset itself can be found in the medium term through appropriate marketing that will enable its conservation; and
- Conservation by grant funding or some form of charitable or public ownership is demonstrably not possible; and
- The harm or loss is outweighed by the benefit of bringing the site back into use

2.7 Paragraph 202 of the NPPF states that where a development proposal will lead to *less than substantial* harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use.

2.8 The proposal involves the demolition of a single storey boiler house that is attached at the rear of the orangery. The boiler house is a relatively modern addition to the listed building and does not contribute to its significance. Its demolition would not amount to total or substantial demolition. Bearing this in mind, and taking into consideration its limited scale, it is not considered that the loss of this part of the listed building will be harmful to the designated heritage asset and it will not conflict with saved policy B4 of the Local Plan.

2.9 The proposal involves limited alteration to the external appearance of the listed building, in addition to the demolition of the boiler house.

2.10 The most significant external change is the replacement of the glazed roof of the orangery with a solid lead roof. The orangery requires restoration given its poor condition and the alteration to the roof is considered acceptable and compatible with the intended use. The design and appearance of the proposed roof is considered to be satisfactory and in keeping with the listed building, however the loss of the original fabric of the building and alteration as proposed amounts to less than substantial harm to the heritage asset.

2.11 The removal of two external staircases is another external change. As the functional appearance of the staircases is currently considered to be harmful to the appearance of the listed building their removal is beneficial.

2.12 The proposed replacement of the timber roof lanterns on the main building which are in poor condition and deemed unrepairable, is also acceptable.

2.13 There will be other interventions internally in order to facilitate the conversion such as blocking of internal openings, mainly for the purpose of creating cellular apartments and create separate rooms. Such changes are considered to be reasonable and acceptable but nonetheless amount to less than substantial harm to the listed building.

2.14 In other respects the internal works are minimal and key features are retained. The longstanding main entry point to the building is to be retained as are the principal elements of communal internal circulation, fireplaces and other features of significance thereby allowing the opportunity to restore and conserve damaged or missing elements. All the principal rooms are being retained in their present form. The partitions used to subdivide the principal rooms are to be removed and the rooms restored to the original proportions.

2.15 As indicated above, some of the elements of the proposal result in less than substantial harm to the heritage asset and as such it is necessary to weigh such harm against the public benefits of the proposal.

2.16 The orangery has been at risk for a number of years and, as indicated by the Conservation Officer, the condition of the main buildings is such that it is now also in the 'at risk' category. Without a new use the building will continue to deteriorate. The proposal is for an acceptable new use for the building and as the conversion works involves the preservation of the vast majority of the fabric and external envelope of the building this is considered to be of significant public benefit. The less than substantial harm that has been identified will therefore be outweighed by such public benefits.

2.17 Subject to control over the details through the use of conditions the proposed development is considered to accord with the NPPF and the local planning policies and guidance set out above.

3. 21/01075/FUL – Full planning application for the conversion to 12 apartments and 2 houses, demolition of the boiler house, and upgrades to driveway and provision of 30 parking spaces

3.1 The main issues in the consideration of this application are:

- The impact of the proposal on the character and appearance of the Listed Building including impact on trees
- The principle of the development in this Green Belt location
- Residential amenity levels of future occupiers
- Parking and highway safety
- Planning obligations

3.2 Impact upon the character and appearance of the Listed Building including impact on trees

3.2.1 In respect of the alterations to the listed building itself there are no further matters to address additional to those set out above. Consideration is, however, required of the proposed amendments to the driveway and provision of car parking spaces and their impact on the setting of the listed building.

3.2.2 Saved NLP Policy B5 states that the Council will resist development proposals that would adversely affect the setting of a Listed Building.

3.2.3 An aspect of the proposal is the incorporation and rationalisation of areas of hardstanding throughout the site in order to accommodate the associated car parking areas. This would result in the narrowing of the width of the main entrance road and the provision of small clusters of car parking areas along its length, and the alteration of the larger parking areas near to the building.

3.2.4 An amended site layout plan has been submitted relocating the position of some of the parking spaces in response to the comments of the Landscape Development Section. As initially submitted, two small areas for parking were to be provided between trees to the south of the driveway. One of these groups has now been shown to be repositioned to the less treed area at the front of the site. In addition the number of parking spaces in the area near to the building has been reduced in area. The number of parking spaces to be provided has been maintained.

3.2.15 Informal parking off the driveway between trees has taken place whilst the building was in use as a nursing home and the 'formalisation' of this practice is not considered to be harmful to the setting of the listed building subject to controls over the surfacing of these areas.

3.2.6 The proposal as amended still involves the removal of trees to accommodate the proposals (2 Sawara Cypress, 1 Norway Spruce and 3 Holly) all of which are Category C, of low quality with an estimated remaining life of at least 10 years. The arboricultural report also recommends the removal of a number of other trees due to poor condition of such trees.

3.2.7 Whilst the loss of trees is always regrettable it is considered that it would not harm the setting of the listed building. Replacement planting for the trees to be removed in association with the development and to compensate for other tree loss due to tree management practices can be secured through a condition.

3.3 Principle of the development in this Green Belt location

3.3.1 Paragraph 137 of the NPPF details that “The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence”.

3.3.2 Paragraph 147 of the NPPF states that inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.

3.3.3 The NPPF further indicates in paragraph 149 that local planning authorities should regard the construction of new buildings as inappropriate in the Green Belt, but identifies a number of exceptions to this. Paragraph 150 states that certain forms of development are not inappropriate in the Green Belt provided they preserve its openness and do not conflict with the purposes of including land within it. The exceptions listed include the re-use of buildings provided that the buildings are of permanent and substantial construction; material changes in the use of land; and engineering operations.

3.3.4 The building as it stands has a residential Class 2 use and is an original building for the purposes of considering this against the Green Belt policy. It is of permanent and substantial construction and therefore, its re-use amounts to appropriate development. No extension or building is proposed. The change of use of the land from a residential institutional use to dwellings to with the associated works building preserves openness and does not conflict with the purposes of including land in the Green Belt as does the proposed engineering works involved in the formation of the access and parking. Such aspects of the proposal are also considered to be appropriate.

3.3.5 Overall it is considered that the proposal comprises appropriate development within the Green Belt.

3.3.6 Policy HOU1 of the Madeley Neighbourhood Plan states that new residential development will be supported where it is in accordance with development plan policy and in particular within the Madeley village envelope and Madeley Heath village envelope.

3.3.7 This site lies outside of the village envelope of Madeley, in the open countryside.

3.3.8 Paragraph 80 of the NPPF states that planning decisions should avoid the development of isolated homes in the countryside unless one of a number of circumstances apply including the following:

- the development would represent the optimal viable use of a heritage asset or would be appropriate enabling development to secure the future of heritage assets; or
- the development would re-use redundant or disused buildings and enhance its immediate setting.

3.3.9 Although outside the village envelope, the site is in a sustainable location within walking distance of the shops and services of Madeley. The proposed conversion would re-use an existing disused building which is an inherently sustainable act and importantly, it would bring the building back into use and secure the future of the heritage asset. No objection is raised to the principle of the conversion therefore.

3.4 Residential amenity

3.4.1 Paragraph 119 of the NPPF states that decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Paragraph 125 supports higher density residential developments provided that they result in acceptable living conditions. Paragraph 127 lists a set of core land-use planning principles that should underpin decision-taking, one of which states that planning should always seek to secure high quality design and a good standard of amenity for all existing and future occupants of land and buildings.

3.4.2 Care has been taken to ensure that the parking areas are positioned away from principal windows of the proposed dwellings to minimise disturbance. The noise report recommends double glazing for south elevation facing the M6 and trickle vents on other elevations, the repair schedule in section G9 and G9.2, however, sets out proposals for the windows and repair and introduction of secondary glazing. This is the correct approach to minimise harm to the listed building whilst protecting amenity.

3.4.3 The proposed dwelling incorporating the orangery would have principal windows in close proximity to the main entrance into the building and largest parking area. Whilst details haven't been provided the site layout plan shows some form of boundary treatment in front of the glazed elevations which would deflect activity away from directly adjacent to the building. It is considered that an acceptable level of residential amenity will be achieved.

3.4.4 The property is set within extensive grounds and whilst the proposal does not include private amenity space for the occupiers of the units, their public open space needs would be met on site. As the proposal does not include family accommodation there is no requirement to provide an equipped play area and as such a contribution towards improvements to public open space off site could not be justified.

3.4.5 In conclusion, it is considered that a good standard of amenity for all existing and future occupants of land and buildings can be achieved and maintained, as required by the NPPF, and subject to suitably worded conditions.

3.5 Parking and highway safety

3.5.1 Policy T16 of the Local Plan states that development which provides significantly less parking than the maximum specified levels will not be permitted if this would create or aggravate a local on-street parking or traffic problem, and furthermore that development may be permitted where local on-street problems can be overcome by measures to improve non-car modes of travel to the site and/or measures to control parking and waiting in nearby streets.

3.5.2 Paragraph 110 of the NPPF states that safe and suitable access to a site shall be achieved for all users and paragraph 111 states that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts of development would be severe. Paragraph 112 also sets out a list of criteria that applications for development should seek to achieve, these include, amongst other things, priority first to pedestrian and cycle movements and designed to enable charging of plug-in and other ultra-low emission vehicles.

3.5.3 The proposed site plan shows the provision of 25 parking spaces for the proposed development and the provision of six additional parking spaces for the occupants of three mews houses adjacent to the application site. This equates to approximately 1.5 parking spaces for each proposed residential unit which is considered to be acceptable.

3.5.4 The submission indicates that the internal road network has been designed to ensure the movements of refuse vehicles can be accommodated without allowing their requirements to dominate the layout. Swept path analysis has been undertaken which seeks to demonstrate that a refuse vehicle can enter the site in forward gear, access bin stores, turn in the proposed turning heads and exit the site in a forward gear. It is considered that the proposed layout strikes the right balance in respect of minimising harm to the setting of the listed building and ensuring that waste vehicles can service the development.

3.6 Planning obligations

3.6.1 As the proposal involves major development, given that 10 or more new dwellings are proposed, the provision of 25% affordable housing is required to accord with policy. This equates to 3 units.

3.6.2 Such an obligation is considered to meet the requirements of the CIL Regulations.

3.6.3 The applicant has been required to submit financial information to demonstrate whether or not there is a conservation deficit (i.e. the cost of repair and conversion of the heritage asset exceeds its market value upon completion) which means that the development cannot support the provision of affordable housing as required by policy. This financial information has subsequently been independently assessed and concludes that the scheme cannot support any affordable housing.

3.6.4 The NPPF sets out the approach to be adopted to viability in planning decisions. It indicates that where up-to-date policies have set out the contributions expected from the development, planning applications that comply with them should be assumed to be viable, and it is up to the applicant to demonstrate whether particular circumstances justify the need for a viability assessment at the application stage. Policies about contributions and the level of affordable housing need however to be realistic and not undermine the deliverability of the Plan. In the Borough it is not presently the case that up-to-date development plan policies, which have been subject of a viability appraisal at plan-making stage, have set out the contributions expected from development, so the presumption against viability appraisals at application stage does not apply. That will not be the case until a Local Plan is finalised. The scheme does provide benefits, which include the reuse of a listed building that is currently 'at risk' and this is considered to outweigh the harm caused by the lack of affordable housing provision.

3.6.5 Market conditions and viability can change over time and it is reasonable and necessary for the Local Planning Authority to require the independent financial assessment of the scheme to be reviewed if the development has not been substantially commenced within 18 months of the grant of the permission, and alterations then made to the level of obligations if the scheme is then evaluated to be able to support higher contributions. This would need to be secured via a Section 106 agreement.

3.7 Reducing Inequalities

3.7.1 The Equality Act 2010 says public authorities must comply with the public sector equality duty in addition to the duty not to discriminate. The **public sector equality duty** requires **public authorities** to consider or think about how their policies or decisions affect people who are **protected** under the Equality Act. If a public authority hasn't properly considered its public sector equality duty it can be challenged in the courts.

3.7.2 The duty aims to make sure public authorities think about things like discrimination and the needs of people who are disadvantaged or suffer inequality, when they make decisions.

3.7.3 People are protected under the Act if they have protected characteristics. The characteristics that are protected in relation to the public sector equality duty are:

- Age
- Disability
- Gender reassignment
- Marriage and civil partnership
- Pregnancy and maternity
- Race
- Religion or belief
- Sex
- Sexual orientation

3.7.4 When public authorities carry out their functions the Equality Act says they must have due regard or think about the need to:

- Eliminate unlawful discrimination

- Advance equality of opportunity between people who share a protected characteristic and those who don't
- Foster or encourage good relations between people who share a protected characteristic and those who don't

3.7.5 With regard to this proposal it is considered that it will not have a differential impact on those with protected characteristics.

APPENDIX

96/00137/LBC & 96/00138/FUL	Extension	Refused and subsequently allowed on appeal
02/00615/FUL	Renewal of planning permission 96/00138/FUL for two storey extension	Permitted
02/00726/LBC	Two storey extension	Permitted
04/00625/FUL	Extension to provide additional patient accommodation for nursing home (Revised Scheme)	Permitted
04/00625/EXTN	Extension to the time limit to implement planning permission 04/00625/FUL for extension to provide additional patient accommodation for nursing home (Revised Scheme)	Permitted
04/00626/LBC	Extension to nursing home	Permitted
21/00021/FUL & 21/00022/LBC	Part demolition and restoration of Listed Building and change of use from nursing home to 10 residential apartments and 1 mews house, construction of 52 new apartments.	Withdrawn

Views of Consultees

The Council's **Conservation Officer** (CO) notes that the current scheme is to provide enabling development off-site to minimise the adverse impact of development on the setting of the listed building which was the case in the previous scheme. It is accepted that a residential conversion of the house is an acceptable way of securing a viable future for the building with minimum careful intervention. Clearly any off-site enabling development, providing all information is put forward to establish the conservation deficit and comply with other aspects of the Historic England's Good Practice Advice 'Enabling Development and Heritage Assets', will preserve the setting of the listed building.

A condition survey has now been undertaken and a schedule of repairs and this gives a much more comprehensive picture of the state of the building which is poor and as the building is vacant, this puts the whole complex with a category of at risk. As the condition survey and photographs were undertaken in April 2021, almost 12 months ago, the building can have only deteriorated further. The survey refers to rapid mould growth and water ingress and penetration in the cellar and from the roof.

The current scheme presented states the following points which are agreed:-

- There will be no significant external alteration,
- The proposal retains the longstanding point of entry into the main building,
- Principal elements of communal internal circulation are retained,
- No fireplaces or features of significance will be removed, with an opportunity to restore and conserve damaged or missing elements,
- All the principal rooms can be retained in their present form, and there will be the opportunity to remove later partitions and to restore rooms to their original proportions (with benefits for cornices, skirtings etc),

- Most of the internal alteration (new partitions and removal of partitions) will take place in the plainer and later service areas of the building.

Various minor interventions are described within the submission and the approach is readily accepted providing that we can agree the details of how this will be undertaken. The building has already undergone such changes over its existence and some of these harmful elements will be rectified through this development. This in turn will preserve the building, its external envelope and setting into the future.

The timber roof lanterns are in poor condition and deemed unrepairable. It is proposed to replace the lanterns with new bespoke units in black painted steel sections with lead dressed detailing. Due to the vulnerable location of the lanterns and rooflights it is proposed that a more robust replacement is provided. The CO is happy with this alteration to the existing materials and considers it to be a sensible approach.

There is extensive restoration required for the orangery and some details have been provided with regard to how and when this will be undertaken but it is relatively speculative. A lead roof is proposed to replace the existing roof which was glazed with a timber structure and steel ties. This is an alteration but one which, given the new use, will enable the building to be sustained into the future.

Notwithstanding the noise report which recommends double glazing for south elevation facing M6 and trickle vents on other elevations, the repair schedule sets out proposals for the windows and repair and introduction of secondary glazing and this should be highlighted as the appropriate way forward. All shutters still in existence should be retained and overhauled so that they can be utilised. Consideration also needs to be given to windows which have a bathroom, especially on the ground floor. The possibility of using the shutters at low level has been discussed.

Given the number of apartments on the site and limited storage within the apartments, the CO wonders what the plans are for storage etc. as there are no elevations or details for cycle store or bin store. It is reasonable that there may be a demand for permanent storage of bikes etc and the apartments do not have that much room. Positioning of cycle store is not convenient. We want to consider and prevent future issues and possible enforcement cases around erection of sheds etc and other domestic paraphernalia. Details of screening around conservatory are required. In addition arrangements for management of the grounds is important and how spaces can be used etc.

Schedule of works indicates full scaffold which would help to keep the water out. This ideally needs to be erected as soon as possible and would negate the need for the Council to consider ways of dealing with the building at risk through its enforcement powers, such as an urgent works notice. The CO considers that the Council should be considering this as our next steps potentially because if this proposal is considered acceptable and grant permission the indication is still that enabling development is still required and this complicated process could take some time. Meanwhile the building will continue to deteriorate and suddenly the parameters of the enabling scheme will change.

Timescales are key to ensuring the building does not continue to get worse and begins to be repaired and we cannot ensure this happens through this set of applications.

The **Conservation Advisory Working Party (CAWP)** were happy that the scheme was now workable and practical and were aligned with the general principles and fully supportive of its intentions to restore the listed building with a viable use.

A lot of detail is still missing particularly regarding ventilation and heating, resultant trunking and vents especially between apartments. In addition more detail is needed for the windows, for example any replacements and secondary glazing.

The group were happy with the incorporation of the orangery into a dwelling but felt that the room layout in this apartment could be slightly altered and would prefer it if some glazing could be retained on the roof. Concern was raised on the large amount of glazing within the new room and how this would be dealt with from an energy efficiency and heritage perspective. They felt that the orangery needed a separate more detailed schedule of works and specification.

Historic England state that in heritage terms the current proposals are a significant improvement on the previously submitted scheme. However, further detailed information is required, and they would recommend that this is provided for consideration prior to these applications being determined.

Given that the condition of Madeley Manor continues to decline, they would also recommend that consideration be given as to what repairs and holding works are required in the short to medium term, in order to ensure that this important Grade II listed building is stable, secure, water tight and well ventilated.

The **Landscape Development Section** states that the submitted tree protection plan merely identifies areas of road and footpath within root protection areas and labels them as special measures, without addressing what form the special measures will take. It is unlikely that a 'no dig' solution will be possible in most cases and the special measures are unlikely to be able to be confined to the areas shown. Amendments to the scheme are likely to be required to avoid significant harm to and potential loss of trees. Concern remains that the proposals of the tree report are unworkable and that without further detail, the scheme in its current form will cause avoidable harm to existing trees. The measurements shown for the layout if the proposed protective fencing are insufficient for accurate installation.

The **Highway Authority** has no objections to the proposal subject to conditions relating to the following matters:

- Provision of access, internal roads, parking and turning areas prior to occupation.
- Prior approval of surfacing materials for internal roads, parking and turning areas.
- Provision of secure weatherproof cycle parking in accordance with details to be approved.

The **Local Lead Flood Authority** has no objections as the plan shows that any additional footprint will be permeable paving and does not appear to show any other changes relevant for drainage. There is unlikely to be a significant impact on surface water caused by any of the proposed changes, given the proposals, and the existing risk to the site.

The **Public Rights of Way Officer** indicates that public footpaths nos. 9 and 52 Madeley Parish run through the development site. The submission shows an unidentified public right of way which deviates from the legal line of the path. The applicant needs to submit a plan showing the legal line of path, along with the development proposals.

The attention of the developer should be drawn to the requirement that any planning permission given does not construe the right to divert, extinguish or obstruct any part of the public path.

It is important that users of the path are still able to exercise their public rights safely and that the path is reinstated if any damage to the surface occurs as a result of the proposed development. It is asked that trees are not planted within 3 metres of the footpath unless the developer and any subsequent landowners are informed that the maintenance of the trees is their responsibility.

Cadent Gas states that they have gas assets in the area which may be affected by the proposal.

Madeley Parish Council has no objections.

The **Environmental Health Division** has no objections subject to conditions regarding contaminated land, a Construction Environmental Management Plan, overheating, glazing specification, plant noise, lighting and electric charging points.

The Council's **Waste Management Section** requires clarification on the bin store size and access.

The County Council as the **Mineral and Waste Planning Authority** makes no comments on the application.

No comments have been received from the Council's **Housing Strategy Section** and given that the period for comment has now expired, it must be assumed that they have no comments to make.
